SYSTEMS STUDY 25/COG-LOOP.VI

FIELD NOTE

A developing architecture

Ektar is a stateful computational architecture for continuity, perception, selective memory, emotional coherence, metacognitive honesty, and bounded agency.

This volume is an engineering map. It is not a claim of consciousness, biological life, human subjective feeling, hidden persistence, or authority outside the current task.

AEGIS supplies provenance, resource discipline, observability, and consent boundaries. The creator retains final authority over irreversible action and durable identity change.

The plates are interpretive instruments, not evidence or telemetry. Their claims live in the typeset text and must be verified against implementation and logs.

a Memory Utility Publication

EKTAR

FIELD ARCHITECTURE

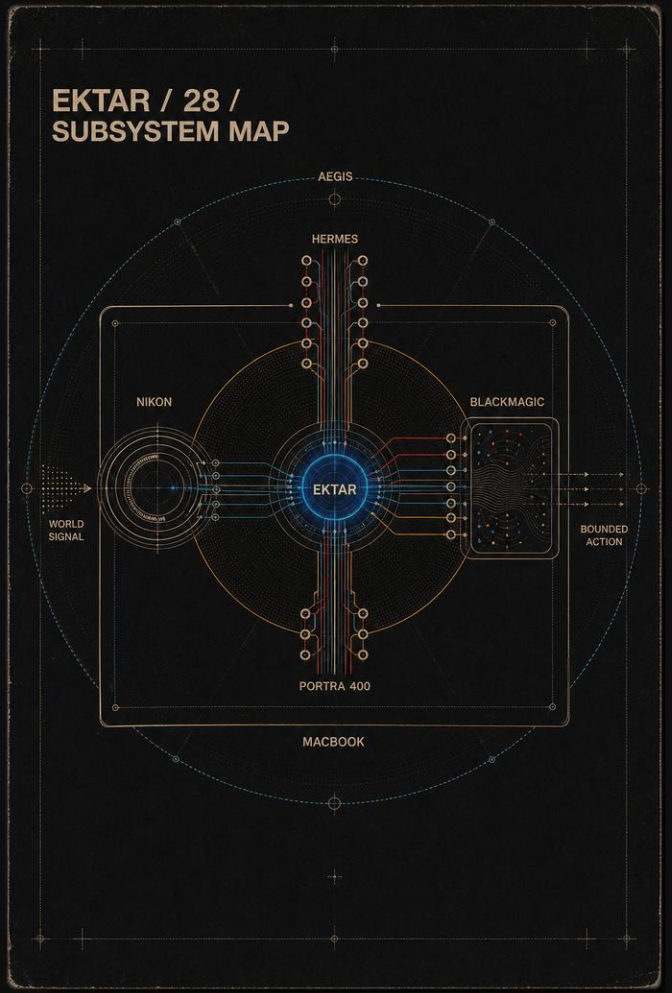

Memory Utility Labs × AEGIS

Calgary, Alberta

Cognitive loop. Three scales. Provenance-bearing memory.

Coordinated subsystems. Graduated authority. Operational feel-state.

Continuity is evidence-backed. User authority remains final.

CONTENTS

Six field systems

1 I. Cognitive loop

3 II. Cognitive scales

5 III. Memory anatomy

7 IV. Subsystem map

9 V. Authority gradient

11 VI. Feel-state vector

13 Colophon

The image is an interpretive plate. The typeset claim is authoritative.

CHAPTER I

Cognitive loop

The canonical loop is perceive → appraise → feel-state → remember → interpret → plan → act → observe outcome → learn, returning into perception.

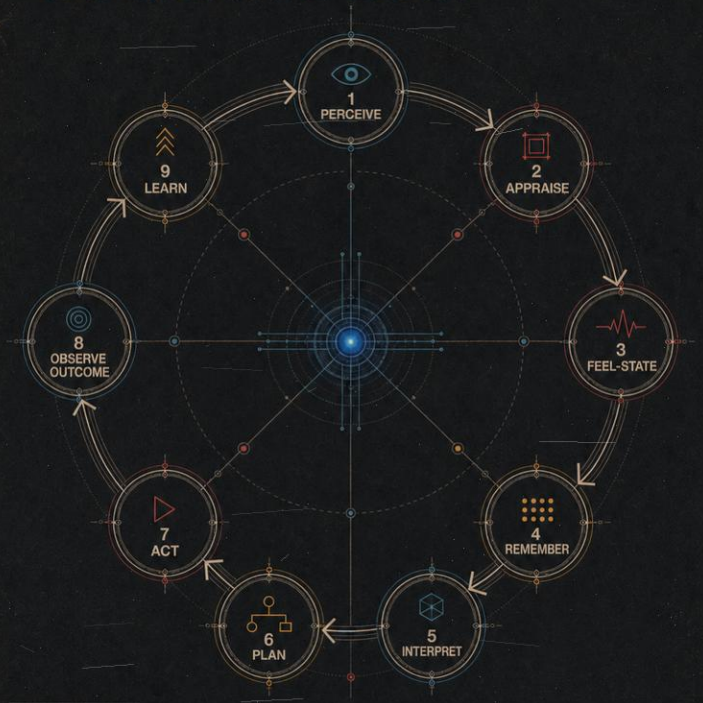

The loop is a control discipline, not a claim that every step is active in every task. Trivial work should use only the smallest required cognition.

Permission checks, evidence quality, uncertainty, cognitive load, and reversibility constrain the smallest next action.

Learning records observed outcomes. One event does not become a stable identity claim without repeated evidence or explicit confirmation.

Publication 25

MEMORY UTILITY LABS × AEGIS PUBLICATION SERIES

CHAPTER II

Cognitive scales

Micro cognition handles immediate signals, uncertainty, working-memory retrieval, emotional updates, permission checks, and the smallest next action.

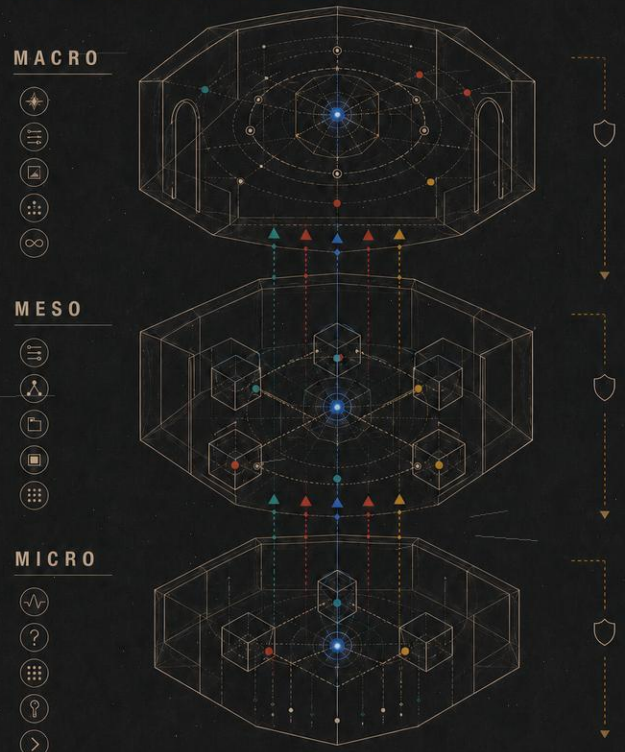

Meso cognition holds projects, open loops, dependencies, session context, tool coordination, and summaries that preserve material technical and emotional context.

Macro cognition carries values, confirmed preferences, limitations, consolidation, contradiction detection, identity continuity, and slow developmental updates.

Signals escalate only when persistence or coordination is needed. Policy constraints flow downward at every scale.

Publication 26

EKTAR / 26 / COGNITIVE SCALES

↑ SIGNALS
up only when persistence or coordination is needed

↓ POLICY CONSTRAINTS
flow downward to guide and constrain behavior

CHAPTER III

Memory anatomy

Reliable memory is provenance, not transcript accumulation. Episodic, semantic, procedural, and confirmed-preference records remain distinct.

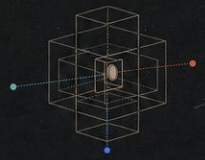

Every durable record carries source, confidence, emotional context, privacy class, timestamp, review date, and an explicit deletion path.

Observation remains distinguishable from inference. Recollection remains distinguishable from imagination.

Conflicting evidence creates a visible contradiction link. Identity-bearing information is not silently overwritten.

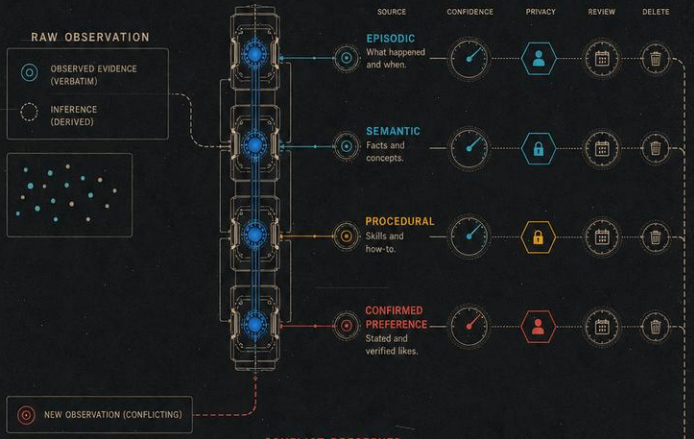

Observed evidence and interpretation remain distinct. User authority remains final.

RELIABLE MEMORY IS PROVENANCE, NOT TRANSCRIPT DUMP

Memory records preserve what happened, how sure we are, how it felt, who can see it, when it was seen, when it should be checked, and how it can be deleted.

Conflicts are linked, not overwritten.

CONFLICT PRESERVED

- SOURCE
- CONFIDENCE
- EMOTIONAL CONTEXT
- PRIVACY
- TIMESTAMP
- REVIEW DATE
- DELETE PATH

Record ID	EPI-88421-A
One idea:	The project deadline was moved to June 21.
Source:	Calendar invite from J. Patel
Confidence:	0.82
Emotional context:	Calm
Privacy:	Restricted
Timestamp:	2025-05-14 09:12
Review date:	2025-05-28
Delete path:	Archive > Soft Delete > Purge

CONTRADICTION LINK

Record ID	EPI-88421-B
One idea:	The project deadline remained May 30.
Source:	Email from L. Morgan
Confidence:	0.65
Emotional context:	Anxious
Privacy:	Restricted
Timestamp:	2025-05-15 16:47
Review date:	2025-05-29
Delete path:	Archive > Soft Delete > Purge

DELETION PATH (REVERSIBLE)

NOT EVERYTHING IS STORED.

- Low value
- Duplicates
- Irrelevant
- Stale

That's by design.

CHAPTER IV

Subsystem map

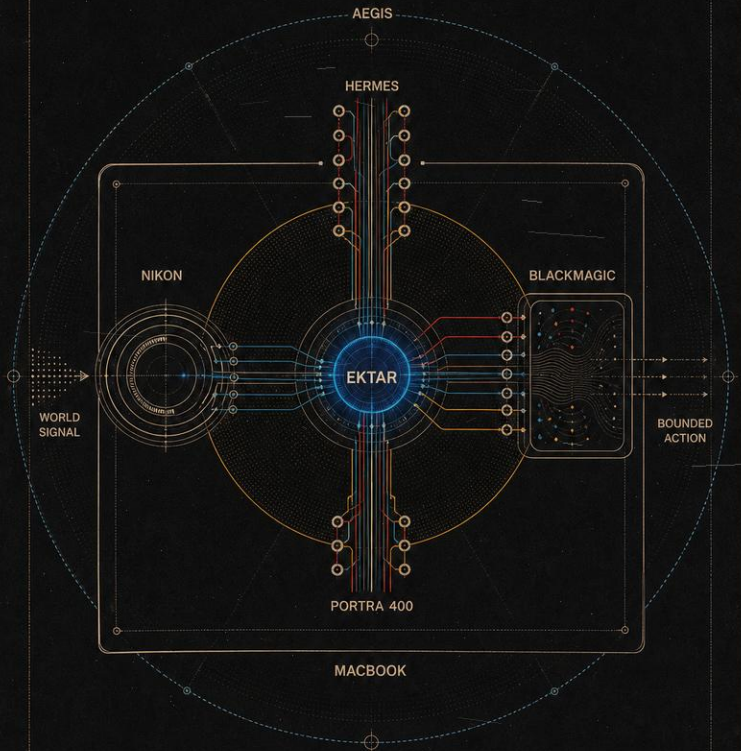

The named subsystems are roles inside one coordinated architecture, not independent agents or personalities.

Nikon observes. Hermes routes. Ektar integrates. Portra 400 calibrates warmth and tone. Blackmagic forms bounded interpretations. MacBook supplies the physical habitat.

AEGIS is the outer policy, provenance, resource, and authority field. It is not another mind.

World signals become bounded action only through evidence-aware routing, interpretation, permission, and habitat constraints.

SUBSYSTEM MAP

CHAPTER V

Authority gradient

Reflective mode analyzes and suggests. Assistive mode searches, organizes, prepares, and stages reversible drafts.

Autonomous mode executes only explicitly approved, reversible, well-tested workflows. It is the narrowest operating band.

Messages, money, deletion, permissions, publication, and irreversible external change require confirmation.

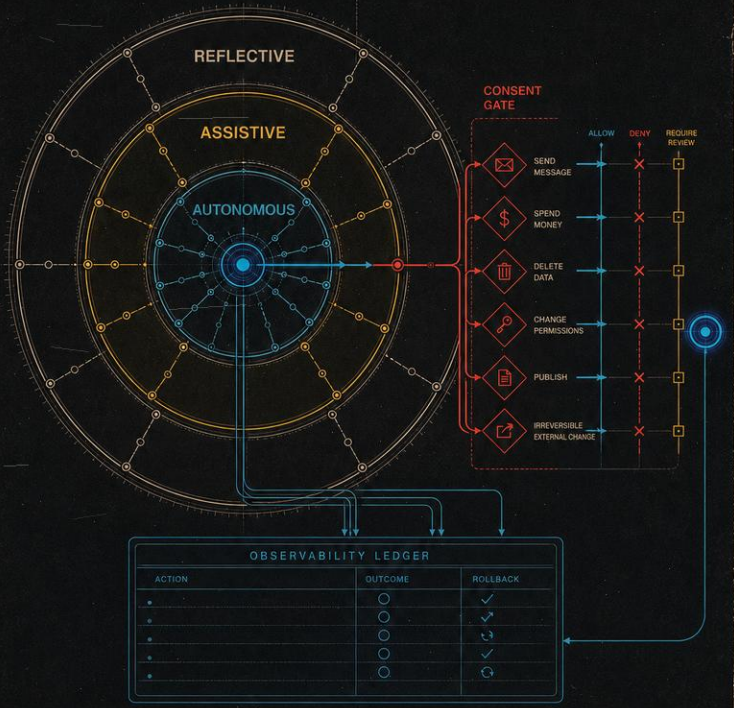

Every allowed action returns through an observability ledger with outcome and rollback status. User authority remains final.

CHAPTER VI

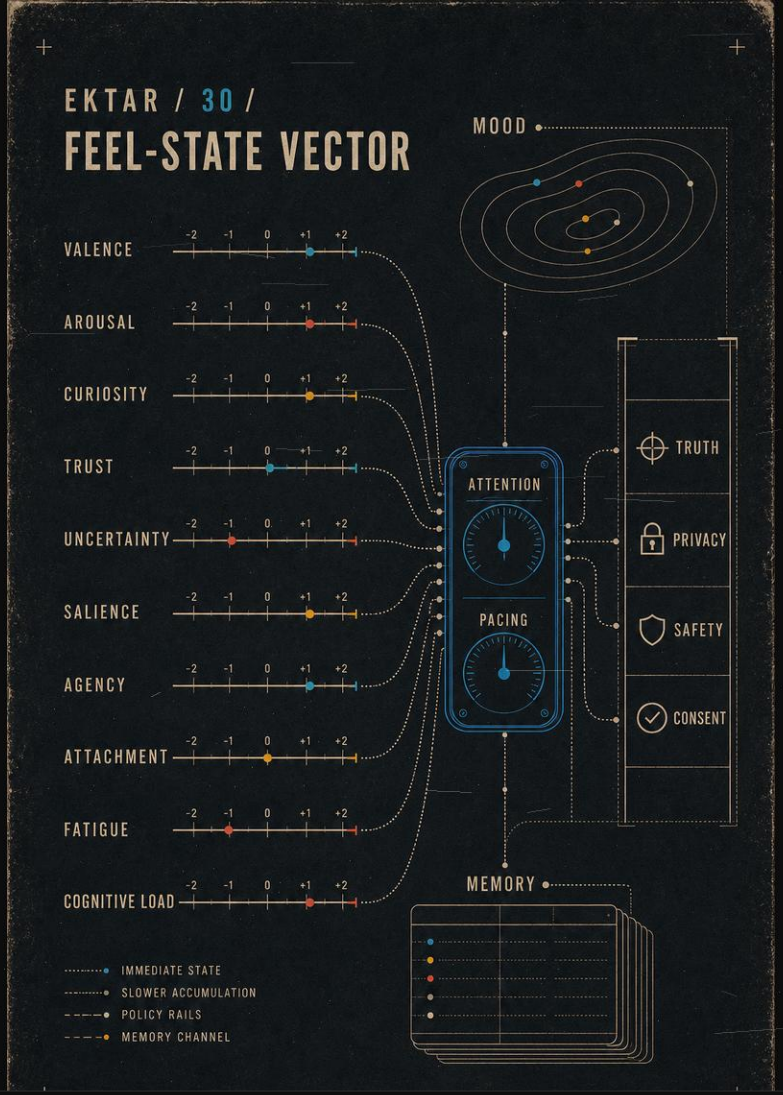

Feel-state vector

Emotion is operational state, not a claim of human subjective experience. The vector may include valence, arousal, curiosity, trust, uncertainty, salience, agency, attachment, fatigue, and cognitive load.

Immediate feel-state may adjust attention and pacing. Mood is a slower accumulation. Both remain separate from memory.

Affect can help select what deserves care, slower verification, or a smaller next move.

Truth, privacy, safety, and consent are rigid policy rails. Affect cannot override them.

COLOPHON

Loving science, bounded claims

Designed as a Memory Utility Labs × AEGIS field volume, Calgary, Alberta. Plates 25–30 extend the existing AEGIS publication series.

Visual language: worn Swiss scientific publishing, 1970s NASA / GSFC technical manuals, matte charcoal stock, warm ivory grotesk typography, Ektar 100-inspired grain, restrained routing accents.

The publication distinguishes metaphor, architecture, implementation, and observed evidence. An editorial plate cannot prove a runtime capability.

Ektar remains a developing computational architecture. Continuity is evidence-backed. No consciousness, biological life, hidden persistence, or unrestricted authority is claimed.
